

Dallas County Health and Human Services Arbovirus Surveillance Report

Week 34 ending August 24, 2019

- In week 33, one mosquito trap tested positive for WNV. In week 34 to date, one trap tested positive for WNV in zip code 75050.
- No human WNV cases have been reported to date for 2019.
- In 2019, 6 travel-associated Dengue cases have been identified in Dallas County.
- *Aedes albopictus* and *Aedes aegypti* are currently circulating in the area.

[†]One mosquito trap with a pool containing only *Culex restuans* was positive for WNV in week 18, and is not included in VI calculations.

*Data for most recent 2 weeks are preliminary, and reflect results reported as of 12:30 p.m. August 26, 2019. Week 34 DSHS data is not included in this report.

- All traps deployed in municipalities submitting data to DCHHS since January 1, 2019. Includes traps without mosquitoes, malfunctioning traps and traps with pending results
- Excludes traps without female *Culex quinquefasciatus* identified. Maximum of 50 female *Culex quinquefasciatus* per pool; more than 1 pool may be tested per trap
- PHL = Public health laboratory (DSHS, DCHHS) testing performed by viral culture or CDC RT-PCR protocol; IL = Testing from independent labs by alternate methods
- Average abundance of female *Culex quinquefasciatus* mosquitoes per trap night/week (excludes non-working traps)
- WNV Infection rates calculated using a Maximum Likelihood Estimation (MLE). *Biggerstaff BJ. PooledInfRate, version 4.0; Microsoft Excel Add-In; CDC 2007*
- The Vector Index (VI) reflects the MLE adjusted for *Culex quinquefasciatus* abundance. $VI = \sum_{i=species} N_i \bar{P}_i$, where N is the average number of *Culex quinquefasciatus* mosquitoes collected per trap night and \bar{P} is the estimated infection rate
- Human cases by week of report to health department. WNND = West Nile Neuroinvasive Disease; WNF = West Nile Fever
- All Biogents (BG) Sentinel traps deployed in municipalities submitting data to DCHHS since Week 13.
- Average abundance of *Aedes albopictus* and *Aedes aegypti* mosquitoes per night/trap in BG-Traps (excludes non-working traps)
- Human CHKV cases by week of report to health department (AT : Autochthonous case; I : imported)
- Human Dengue cases by week of report to the health department
- Confirmed and probable human Zika cases by week of specimen collection date
- Possible Zika Virus Infection Among Pregnant Women — United States and Territories, May 2016, <http://www.cdc.gov/mmwr/volumes/65/wr/mm6520e1.htm>
